AIM OF THE SEMINAR

The seminar consists of a series of lectures, on selected topics in the diagnosis and management of breast carcinomas. It provides a practical approach to diagnosis, with focus on the information that needs to be reported to clinicians involved in patient care and its significance in guiding treatment decisions.

The seminar includes interactive case presentations, based on review of either digital or glass slides with screen projection.

The seminar aims to address recurrent issues encountered by practicing pathologists in the review of breast cases, in a collegial setting that fosters open and direct interaction among all course participants, with sharing of information based on knowledge and personal experience.
