AIM OF THE SEMINAR

The seminar will be focused on a limited number of lectures, covering selected hot topics in diagnosis and management of thyroid and salivary glands tumors, followed by informal and interactive case presentation sessions. Cases will be presented either as virtual digital cases or through a microscope with life screen projection. Participants are encouraged to actively interact with the faculty during the discussion sessions and during the case presentation sessions. We want to create a warm and inclusive environment, where all participants feel comfortable to ask questions and bring their personal experience.
